

X-RAY

X-Rays are needed to **set up an accurate diagnose** and make a treatment plan suited to the exact needs of the patient

It helps **discover cysts and periapical inflammations**, that need to be treated as soon as possible, so it is very **important for them to be recognised in time**

An X-Ray is **needed before certain types of treatments**, such as orthodontics or oral surgery

With a **digital X-Ray** the risks of **radiation are minimalised** – our dentistry works according to the ALARA principle, meaning As Low (Risk) As Reasonably Achievable – in case of dental problems, **you risk more with neglecting the problem** than with having an X-Ray with minimal radiation!
